

Task :- 1

Polymorphism

Task :- 2

Abstraction

Task :- 3

Write a program where you have to apply boxing operation on a value type. Also, show how you can do the unboxing operation.

In the same program, take an attribute of double type in a way that it can also store null value.

Also, take a variable which can store any type of data where explicit type casting is not needed.

Finally, show an example of the anonymous type.

In the program do comments your logic by commenting.
